

**Catheter Ablation versus Standard
conventional Treatment in patients with LEft
ventricular dysfunction and Atrial Fibrillation**

The CASTLE-AF trial

**Nassir F. Marrouche MD
on behalf the CASTLE AF Investigators**

Declaration of interest

- Research contracts (Abbott; Boston Scientific; GE Healthcare; Siemens; Biotronik; Vytronus; Biosense Webster)
- Consulting/Royalties/Owner/ Stockholder of a healthcare company (Abbott; Biotronik; Wavelet Health; Cardiac Design; Medtronic; Preventice; Vytronus; Biosense Webster; Marrek Inc; Boston Scientific)

Background

- **Atrial fibrillation (AF) and heart failure are well intertwined**
- **Catheter ablation of AF in patients with heart failure has been shown feasible**

CASTLE-AF

Rationale and Objective

- Study the effectiveness of catheter ablation of atrial fibrillation in patients with heart failure in improving hard primary endpoints of mortality and heart failure progression when compared to conventional standard treatment

Primary Endpoint

- All-cause mortality
- Worsening heart failure admissions

Secondary Endpoints

- All-cause mortality
- Worsening of heart failure admissions
- Cerebrovascular accidents
- Cardiovascular mortality
- Unplanned hospitalization due to cardiovascular reason
- All-cause hospitalization
- Quality of Life: Minnesota Living with Heart Failure and EuroQoL EQ-5D
- Exercise tolerance (6 minutes walk test)
- Number of delivered ICD shocks, and ATPs (appropriate/inappropriate)
- LVEF
- Time to first ICD shock, and time to first ATP
- Number of device detected VT/VF
- AF burden: cumulative duration of AF episodes
- AF free interval: time to first AF recurrence after 3 months blanking period post ablation

CASTLE-AF

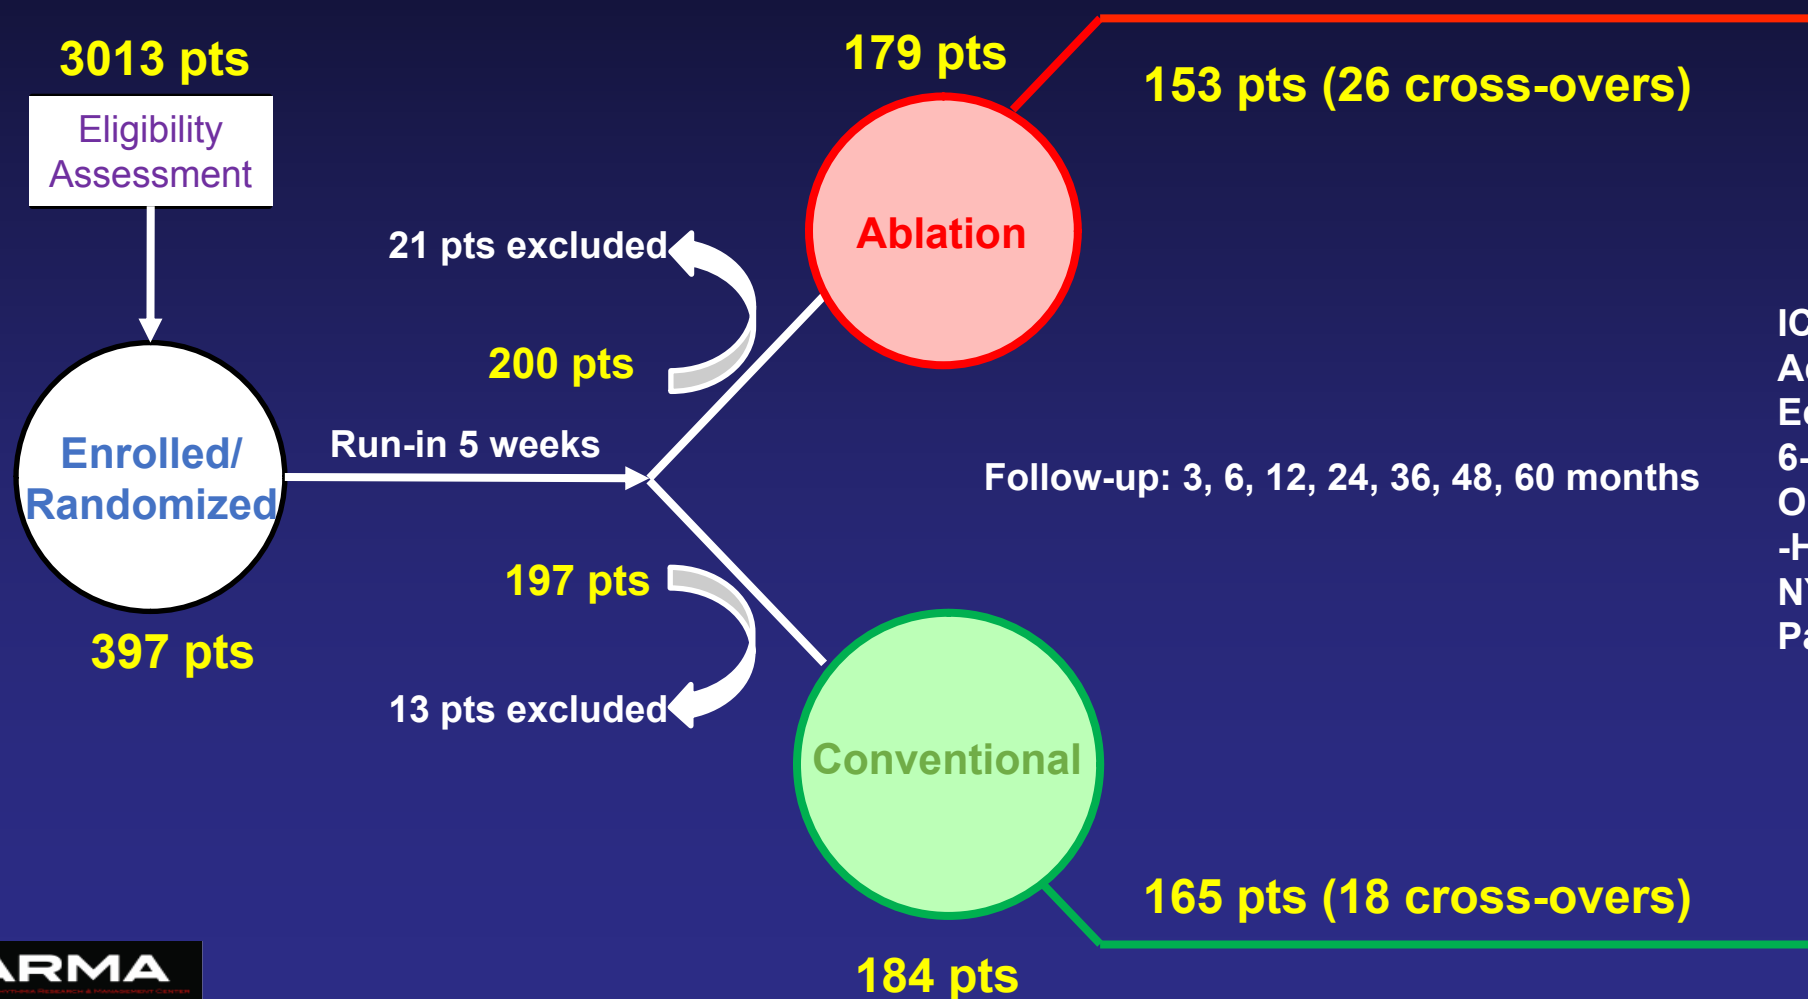

Inclusion Criteria

- Symptomatic paroxysmal or persistent AF
- Failure or intolerance to ≥ 1 or unwillingness to take AAD
- LVEF $\leq 35\%$
- NYHA class $\geq II$
- ICD/CRT-D with Home Monitoring capabilities already implanted due to primary or secondary prevention

Study Design— CASTLE-AF

- Investigator initiated, Prospective, Multicenter (31 sites, 9 countries), Randomized, Controlled

ICD/CRT-D check
Adverse event documentation
Echocardiography
6-minute walk test
Optimization of medication for HF
-Home Monitoring programming
NYHA, weight, BP, QoL
Patients' diary

CASTLE-AF

Treatment Protocol - Conventional Arm

- According to the ACC/AHA/ESC 2006 guidelines for treatment of AF in Heart Failure patients
- Efforts to maintain sinus rhythm in this study arm were recommended
- In case of rate control strategy:
 - 60 and 80 beats per minute at rest
 - 90 and 115 beats per minute during moderate exercise
- Anticoagulation was initiated, if not already started, and maintained throughout the study. The INR was maintained between 2.0 and 3.0

CASTLE AF

Ablation Protocol

- Pulmonary Vein Isolation
- Additional lesions
 - at discretion of operator
- Repeat ablation after blanking period

Baseline Characteristics-CASTLE AF

	Ablation group (179 patients)	Conventional group (184 patients)
Age – years	64 (56-71)	64 (56-73.5)
New York Heart Association class		
I (%)	11	11
II (%)	58	61
III (%)	29	27
IV (%)	2	1
Left ventricular ejection fraction – %	32.5 (25.0-38.0)	31.5 (27.0-37.0)
Current type of atrial fibrillation		
Paroxysmal (%)	30	35
Persistent (%)	70	65
CRT-D implanted (%)	27	28
ICD implanted (%)	73	72

Baseline Characteristics-CASTLE AF

	Ablation group (179 patients)	Conventional group (184 patients)
ACE-inhibitor or ARB – no. (%)	94	91
Beta-blocker – no. (%)	93	95
Diuretic – no. (%)	93	93
Digitalis – no. (%)	18	31
Oral anticoagulant – no. (%)	93	96
Antiarrhythmic drug – no. (%)	32	30
Amiodarone – no. (%)	97	85

Results-CASTLE AF

Rate Versus Rhythm Control in Conventional Arm

Percent of Patients (%)

12/31/18 1/12/19 1/24/19 2/5/19 2/17/19 2/17/20
1899 900 900 00 900
12:00:00 AM 12:00:00 AM 12:00:00 AM 12:00:00 AM 12:00:00 AM

Follow-Up Time (Months)

Rate control:

- Beta-blocker
- Digitalis
- Calcium antagonist
- Atrioventricular node ablation (in 5 patients)

Rhythm control:

- Antiarrhythmic drug
- Atrial fibrillation ablation (18 crossover cases)

Results-CASTLE AF

AF Burden Derived from Memory of Implanted Devices

Results-CASTLE AF

Absolute change in LVEF from baseline

Results-CASTLE AF

Serious Adverse Events

Event	Ablation Group (n=179)	Conventional Group (n=184)
	no. patients with event (%)	no. patients with event (%)
Pericardial effusion (acute)	3 (1.7)	0
Severe bleeding (acute)	3 (1.7)	0
Stroke or TIA	7 (3.9)	12 (6.7)
Pulmonary vein stenosis	1 (0.6)	0
Pneumonia	3 (1.7)	1 (0.5)
Groin infection	1 (0.6)	0
Worsening heart failure	1(0.6)	0

Cardiovascular Hospitalization

Patients at Risk

Ablation	179	127	95	60	42	17
Conventional	184	131	91	52	33	8

Results-CASTLE AF

Primary Endpoint-Subgroups

Conclusion-CASTLE AF

- **Catheter ablation** of atrial fibrillation in patients with heart failure is associated with **improved all-cause mortality** and **fewer admissions for worsening heart failure** when compared to conventional standard of care treatment
- **Catheter ablation** of atrial fibrillation in patients with heart failure is also associated with **improved cardiovascular mortality** and **hospitalization** when compared to conventional standard of care treatment
